TEMPLATE · ONE PER INDICATOR

Indicator reference sheet

Write one sheet for every indicator you report, so everyone counts the same thing the same way. Page 1 is a worked example. Page 2 is blank.

PROGRAMME | INDICATOR CODE | VERSION

Worked example (illustrative wording, not official national guidance)

Indicator name	Percentage of children under 1 who received the third dose of pentavalent vaccine (Penta 3)
Why it matters	Shows whether infants complete the primary vaccination series, not just start it.
Numerator	Number of children under 1 year given Penta 3 during the reporting period
Denominator	Estimated number of surviving infants (target population) for the same period and area
Unit	Percentage (numerator ÷ denominator × 100)
Disaggregation	Facility, chiefdom, district, month; fixed post or outreach
Data source	Facility immunisation register and monthly summary form
Collection method	Facility staff tally doses daily and complete the monthly summary
Frequency	Monthly, with quarterly review
Responsible	Facility in-charge (collection); programme data officer (checking and reporting)
Baseline and target	Baseline value, year and source; target value and year
Known limitations	Denominators are estimates, so coverage can exceed 100%. Doses given to children from outside the catchment area inflate the numerator.
How the data is used	Monthly review meetings to plan outreach and follow up defaulters

Tip. If two people could count the same thing differently, the definition is not finished yet.
