TEMPLATE · PROJECT DESIGN

Logframe template

Lay out how activities lead to outputs, outcomes and the goal, with an indicator, a source of evidence and an assumption at each level.

PROJECT | PERIOD | VERSION

The four levels

Level	What it means
Goal	The long-term change the project contributes to, together with others.
Outcome	The change the project is directly responsible for by the end.
Outputs	What the project delivers: people trained, systems built, services provided.
Activities	The work done to produce each output.

The logic. Read it from the bottom up: if we do these activities, we deliver these outputs; if the outputs are delivered and the assumptions hold, the outcome follows.

Worked example (illustrative)

Level	Result statement	Indicator	Means of verification	Assumptions
Goal	Better use of data in immunisation planning in the district	Facilities using monthly data in review meetings	Meeting minutes	
Outcome	Facility immunisation data is complete, timely and accurate	Share of monthly reports on time and passing quality checks	Reporting tracker; data quality checklist	Facilities keep reporting through the year
Output 1	Facility staff trained in data quality checks	Number of staff trained	Attendance records; pre and post tests	Trained staff remain in post
Output 2	Monthly dashboard shared with facilities	Months the dashboard was shared on time	Email or WhatsApp records	Internet access at facilities
Activities	Train staff; supervise monthly; build and share dashboard	Inputs and budget	Activity reports; finance records	Funds released on time
